# CSCI 4502/5502

## Data Mining

Fall 2019  
Lecture 07 (Sep 17)

# Announcements

---

## ◆ Homework 2

◆ due at 9:30am, Thursday, Sep 19

## ◆ Office hours

◆ Tu 11-12pm, Fr 1-2pm (Instructor)

◆ Tu 4-5pm (TA), W 11-12pm (GSS)

## ◆ Course project

◆ team, project idea, data sets

◆ project proposal: Week 7

# Review (I)

---

- ♦ Chap 1: Introduction to data mining
  - ♦ why? data? knowledge? methods? app?
- ♦ Chap 2: Getting to know your data
  - ♦ central tendency, dispersion
  - ♦ attribute types, similarity/dissimilarity
- ♦ Chap 3 : Data preprocessing
  - ♦ cleaning, integration, reduction, transformation & discretization

# Review (2)

---

## ◆ Chap 4 & 5: Data Warehouse, Data Cube

- ◆ what is data warehouse?

- ◆ OLTP vs. OLAP

- ◆ what is data cube?

- ◆ data cube operations

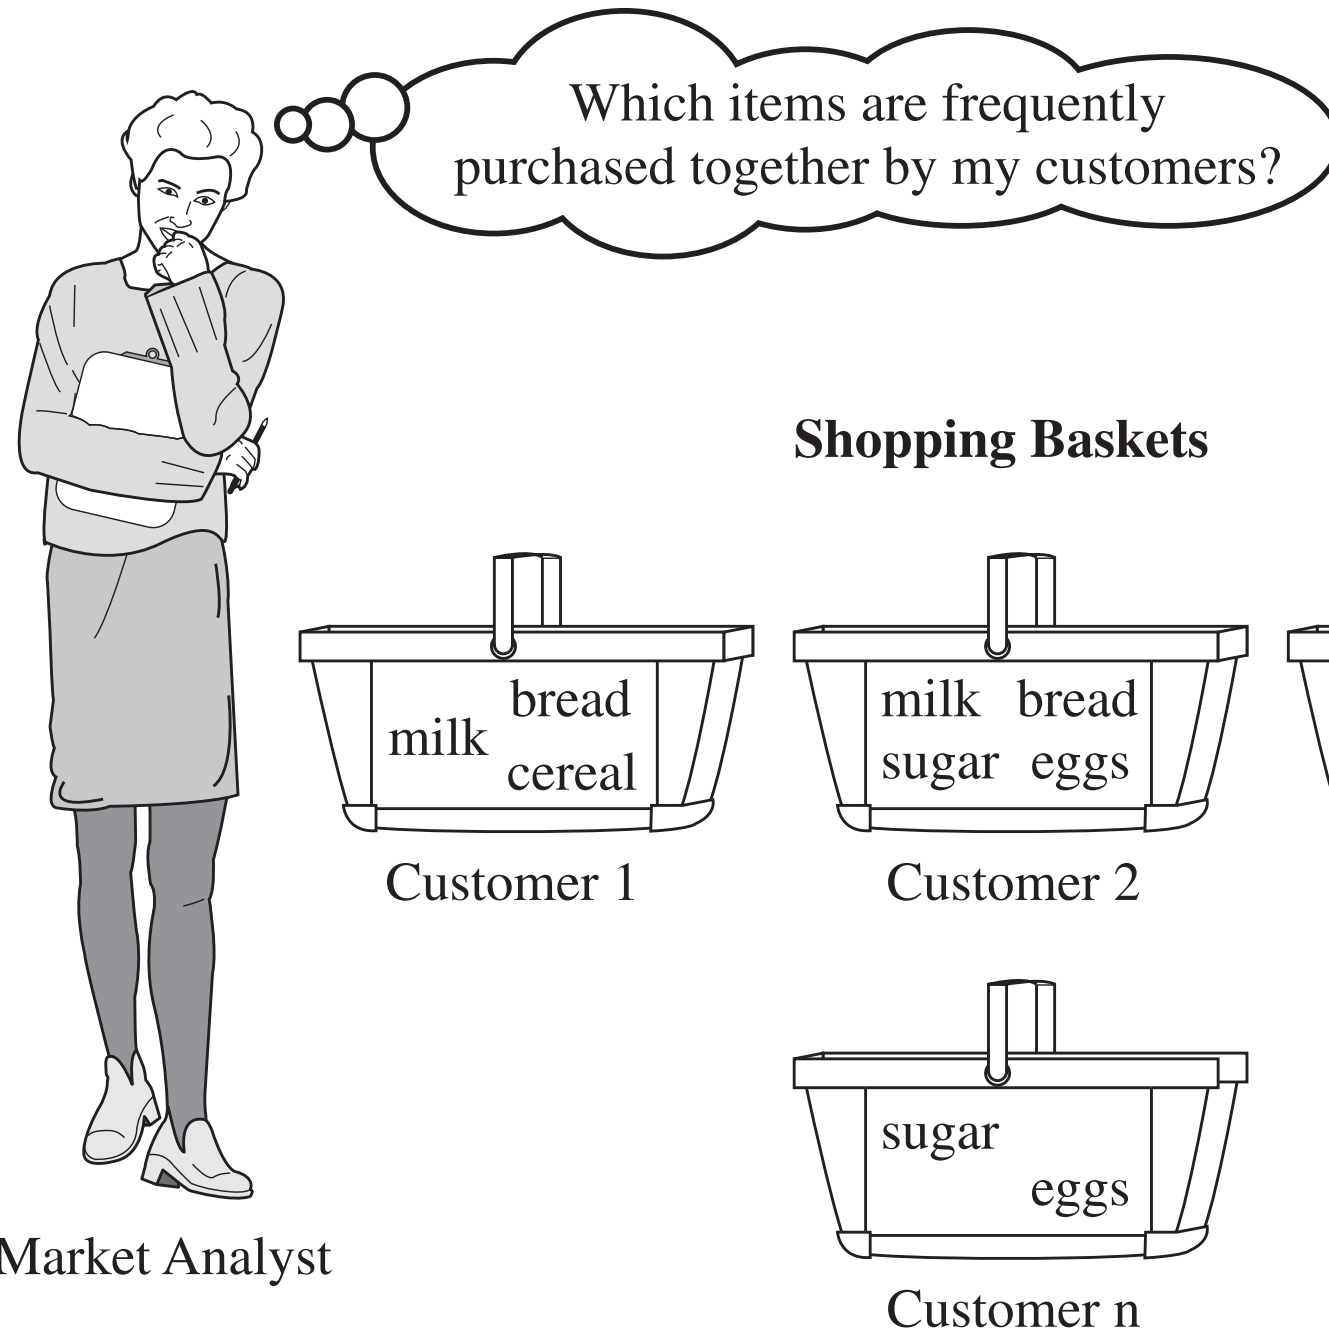

- ◆ data cube computation

# Chapter 6:

## Mining Frequent Patterns, Associations & Correlations

---

# Market Basket Analysis

[http://www.information-drivers.com/images/beer\\_and\\_baby.gif](http://www.information-drivers.com/images/beer_and_baby.gif)

# Frequent Pattern Analysis

---

- ◆ **Frequent patterns** in a data set

  - ◆ a set of items

  - ◆ subsequences

  - ◆ substructures

- ◆ Other examples?

  - ◆ Web log

  - ◆ Road traffic

# Basic Concepts

---

- ◆ **Frequent itemset**

- ◆  $X = \{x_1, x_2, \dots, x_k\}$

- ◆ **Association rule**  $X \Rightarrow Y$

- ◆ **support**: probability that a transaction contains  $X \cup Y$

- ◆ **confidence**: conditional probability that a transaction containing  $X$  also contains  $Y$

- ◆ **minimum support, minimum confidence**

# Example

---

- ◆ Let  $\text{min\_sup} = 50\%$ ,  
 $\text{min\_conf} = 50\%$
- ◆ Frequent patterns
  - ◆ A , B , D , E , AD
- ◆ Association rules
  - ◆  $A \Rightarrow D$  (      %,      %)
  - ◆  $D \Rightarrow A$  (      %,      %)

Tid	Items
1	A, B, D
2	A, C, D
3	A, D, E
4	B, E, F
5	B, C, D, E, F

# Example

---

- ◆ Let  $\text{min\_sup} = 50\%$ ,  
 $\text{min\_conf} = 50\%$
- ◆ Frequent patterns
  - ◆ A 3, B 3, D 4, E 3, AD 3
- ◆ Association rules
  - ◆  $A \Rightarrow D$  ( 60 %, 100 %)
  - ◆  $D \Rightarrow A$  ( 60 %, 75 %)

Tid	Items
1	A, B, D
2	A, C, D
3	A, D, E
4	B, E, F
5	B, C, D, E, F

# Mining Association Rules

---

- ◆ Two-step process
  - ◆ find all frequent itemsets (w/ min\_sup)
  - ◆ generate strong association rules from the frequent itemsets (min\_sup, min\_conf)
- ◆ A long pattern contains a combinatorial number of subpatterns (e.g., 100 items)

$$\binom{100}{1} + \binom{100}{2} + \cdots + \binom{100}{100} = 2^{100} - 1 \approx 1.27 \times 10^{30}$$

# Closed & Max Patterns

---

- ◆ Solution: mine closed patterns & max-patterns
- ◆ Closed pattern  $X$ 
  - ◆ no super-pattern  $Y \supset X$  w/ the same support
- ◆ Max-pattern  $X$ 
  - ◆ no super-pattern  $Y \supset X$
- ◆ Closed pattern is a lossless compression of frequent patterns
  - ◆ reducing the number of patterns and rules

# Example

---

- ◆  $\{ \langle a_1, \dots, a_{100} \rangle, \langle a_1, \dots, a_{50} \rangle \}$  ,  $\text{min\_sup} = 0.5$
- ◆ Frequent pattern?
  - ◆ all item combinations
- ◆ Closed pattern?
  - ◆  $\langle a_1, \dots, a_{100} \rangle$ : 1
  - ◆  $\langle a_1, \dots, a_{50} \rangle$ : 2
- ◆ Max-pattern?
  - ◆  $\langle a_1, \dots, a_{100} \rangle$ : 1

# Apriori Algorithm (I)

---

## ◆ Apriori property

- ◆ subset of a freq. itemset is also frequent
- ◆ e.g., {beer, diaper, nuts}, {beer, diaper}

## ◆ Apriori pruning

- ◆ if  $X$  is infrequent,
- ◆ then superset of  $X$  is pruned

# Apriori Algorithm (2)

---

## ◆ Procedure

- ◆ 1. scan DB to get freq.  $l$ -itemset
- ◆ 2. generate candidate  $(k+1)$ -itemsets from freq.  $k$ -itemsets
- ◆ 3. test candidate  $(k+1)$ -itemsets against DB
- ◆ 4. stop when no freq. or candidate itemsets can be generated

# Apriori Algorithm: Example

---

Tid	Items
1	A, C, D
2	B, C, E
3	A, B, C, E
4	B, E

$\text{min\_sup} = 0.5$

Itemset	sup

Itemset	sup

Itemset	sup

# Apriori Algorithm: Example

Tid	Items
1	A, C, D
2	B, C, E
3	A, B, C, E
4	B, E

min\_sup = 0.5

Itemset	sup
{A}	0.5
{B}	0.75
{C}	0.75
{D}	0.25
{E}	0.75

Itemset	sup
{B, C, E}	0.5

Itemset	sup
{A, B}	0.25
{A, C}	0.5
{A, E}	0.25
{B, C}	0.5
{B, E}	0.75
{C, E}	0.5

# Important Details

---

- ◆ **Self-joining** of  $k$ -itemsets to generate  $(k+1)$ -itemsets
  - ◆ two  $k$ -itemsets are joined if their first  $(k-1)$  items are the same
- ◆ **Pruning**: remove if subset not frequent
- ◆ Example:  $L3 = \{abc, abd, acd, ace, bcd\}$ 
  - ◆  $abc$  and  $abd \Rightarrow abcd$
  - ◆  $acd$  and  $ace \Rightarrow acde$
  - ◆  $acde$  pruned because  $ade$  is not in  $L3$

# Interestingness Measure

---

- ◆ Association rule

  - ◆  $A \Rightarrow B$  [support, confidence]

- ◆ A strong association rule

  - ◆ play basketball  $\Rightarrow$  eat cereal [40%, 66.7%]

- ◆ The rule is misleading

  - ◆ overall, 75% of students eat cereal

  - ◆ play basketball  $\Rightarrow$  not eat cereal [20%, 33.3%]

# Correlation Rules

---

- ◆ Correlation rule

- ◆  $A \Rightarrow B$  [support, confidence, **correlation**]

- ◆ Measure of dependent/correlated events

$$lift(A, B) = \frac{P(A \cup B)}{P(A)P(B)}$$

- ◆  $lift = 1$ ? independent

- ◆  $lift < 1$ ? negatively dependent

- ◆  $lift > 1$ ? positively dependent

$$lift(A, B) = \frac{P(A \cup B)}{P(A)P(B)}$$

	basketball	not basketball	sum (row)
cereal	2000	1750	3750
not cereal	1000	250	1250
sum (col)	3000	2000	5000

$$lift(B, C) = \frac{2000/5000}{(3000/5000) \times (3750/5000)} = 0.89$$

$$lift(B, \bar{C}) = \frac{1000/5000}{(3000/5000) \times (1250/5000)} = 1.33$$
